

YouTube Video Gallery FAQ

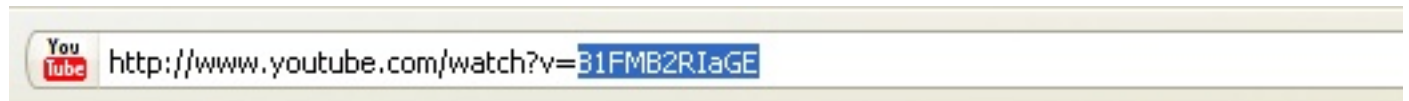

How do I add a playlist I created on the YouTube website?

Open the file "videogallery.xml" located in the deploy folder. Now create a new playlist node or just copy one of the existing. Set the title by setting the value of the "title" attribute. After that set the value of the "youtube_id" attribute. This has to be the ID of the playlist you created on the YouTube website. To get the playlist ID just login to your YouTube account and open your playlists. Now click on the desired playlist in the left menu and copy the ID from the URL like shown in the image below.

How do I add single videos to the video gallery?

Open the file "videogallery.xml" located in the deploy folder. Now create a new playlist node or just copy one of the existing. Set the title by setting the value of the "title" attribute. Now add or copy a "video" node. Set the title of the video by setting the value of the "title" attribute and the description by adding your text between the "description" tags. This text can be HTML formatted. In this case do not forget to add CDATA tags around the text like in the example file. After that specify the YouTube ID of the video you would like to show by setting the value of the "youtube_id" attribute. To get the ID just open the desired video on the YouTube website and copy the ID from the URL like shown in the image below.

How do I change the size of the video gallery?

Open the file "videogallery.xml" located in the deploy folder and set the value of the "width" and "height" attributes of the "videogallery" node.

How do I change the blue color to something other?

Open the file "videogallery.xml" located in the deploy folder and set the value of the "highlight_color" attribute of the "videogallery" node to the desired color. The value has to be in the following format: 0xFF0000

How do I embed the video gallery in my website?

To embed the gallery I propose using SWFObject. Have a look at the example HTML file in the "deploy" folder or check out the documentation on <http://code.google.com/p/swfobject/w/list>. After you made all necessary adjustments upload all files from the "deploy" folder - ready!

Note: If you want to test the file in the flash IDE, loading videos will not work due to security restrictions. Please test the file outside the IDE and allow access by using the "Global Security Settings panel" on prompt.
