Support only on our public forum: <http://forum.oxyplusflash.com/slick-full-website-template-cms-2-skins/>

Main Component – main.xml

In the .xml file you will be able to specify as many buttons as you need for this plus you will also be able to specify which swf each button will load and which .xml file will be loaded for the module. If you have a swf file that is not in the current build you will not need to specify the .xml file. Your swf will be properly loaded using its own hard coded xml file. The xml file will load before loading the swf file, this is done to avoid any delays in displaying the current content of the loaded swf file.

- title="some title" – this will be the buttons title
- swf="some_swf.swf" – this will be the loaded swf file when pressing the button
- xml="some_xml_file.xml" – this will be the loaded .xml when pressing the button
- urlTitle="Some title" – this is the title which will appear in the browser when pressing one button.
- url="/my url/" - this will be displayed in the browser's address bar, this url will be remembered by the browser and you will be able to copy paste it to a friend to show him only a section of the website. You will also be able to use the prev and next buttons in your browser
- copyright: title="some company" – This will be the title displayed at the bottom of the page.
- <logoGraphic>logo/actual-logo.png</logoGraphic> - This is the logo loading in the upper center of the page.

About us – aboutus.xml

In the .xml file you will be able to specify some settings, the title which will be displayed at the top of the module, an html formatted description and as many images as you need. The images will fade one after another like a slideshow.

- <imageWidth>411</imageWidth> This is the image's width
- <imageHeight>367</imageHeight> This is the image's height
- <slideshowInterval>7</slideshowInterval> This is the slideshow interval in seconds, currently it's set to 7 seconds.
- <fadeInAnimationTime>0.5</fadeInAnimationTime> This is the fade in animation time in seconds
- <fadeInAnimationType>linear</fadeInAnimationType> This is the fade in animation type
- title="About Us" This is the title displayed at the top of the module
- url="/About Us/" This is the url displayed in the browser unless mentioned in the main.xml, this is for reference only

<http://www.oxyplusflash.com>

- `<![CDATA[Some random text]]>` This is the html formatted description
- `<item src="AboutUs/1.jpg" ></item>` This is the image address, `src="something.jpg"` represents the image address, copy paste as many of the item node to create more images, of course changing each image address for each

Mp3 Player - mp3player.xml

The mp3 player has a separate .xml file, we have created this mp3 player a long time ago and we have kept most of it's xml file here, but we also added a few extra values.

- `enabled="false"`, `enabled="true"` – This will toggle on/off the mp3 player
- `onFirstStart="mute"`, `onFirstStart="play"` – This will decide either the player will start in play mode or in paused mode.
- `PlayingVolume="70"` – This is the player's playing volume
- The other settings are for the graphics, the settings are self-explainable and easy to use.
- `<music src="music/blur.mp3" title="Some artist – Some song"></music>` - This will add an entry into the playlist, you can modify the mp3 file address: `src="something.mp3"` and the title: `title="some title"`

Banner Rotator – banner.xml

The full banner rotator help file has been included in this release. We have this component launched separately from this template. You will be able to use it as standalone in any of your projects.

Clients – clients.xml

In this module you will be able to alterate some settings and of course all of it's content.

- `<imageWidth>198</imageWidth>` This is the thumb's width
- `<imageHeight>93</imageHeight>` This is the thumb's height
- `<horizontalSpace>16</horizontalSpace>` This is the horizontal space between the thumbs
- `<verticalSpace>15</verticalSpace>` This is the vertical space between the thumbs
- `title="Our Clients"` This title will be displayed at the top of the module, you will also have a html formatted description which can be of any height, the other components will be placed just under this.
- `<client src="clients/1.jpg" name="Names goes here" description="The description goes here" url="http://www.google.com" target="_blank"></client>` This is the data only for one client / item. `src="some_image.jpg"` (the image url); `name="some name"` (the name that will appear in the tooltip); `url="www.something.com"` (the url that will be launched when pressing the thumb); `target="_self"` or `target="_blank"` (the launch target for the url)

Contact us – contactus.xml

This is a contact form with 4 input fields and you can also upload a file. Before sending the message it will validate all its fields. You can specify a title and a html formatted description as well as other additional fields with the corresponding url. In the settings node you must specify the php script used for the text and the php script used for the upload. You can use this independently from the template.

- `<text>text.php</text>` This is the php script file for the text fields and for sending the form
- `<upload>upload.php</upload>` This is the php script file for uploading one file
- `title="Contact Us"` This is the title displayed at the top of the module
- `<![CDATA[some details]]>` This is a html formatted description
- In the `<contactData.....></contactData>` node you will be able to change some urls(email, web, ym, msn, skype), you will also be able to toggle on/off each of them. The urls will be launched with the target set to "_blank" for all.

Jobs - jobs.xml

- `<text>text.php</text>` This is the php script file for the text fields and for sending the form
- `<upload>upload.php</upload>` This is the php script file for uploading one file
- `title="some title"` This is the title displayed at the top of the module
- `urlTitle="Jobs"` Title displayed in the browser
- `url="/Jobs"` displayed in the browser's address
- `<item>` Here the details for each news will come: `title="something"` (the title), `date="some date like 24/12/2009 or just plain text"`, `urlTitle="some title"` (this will be added and displayed in the browser's title field when previewing the job in popup mode), `url="/Senior"` (this will be added to the url to the browser's url" id="1" (this will be used for the admin panel to properly handle the jobs.
- In the `<small_description>` node you will be able to input the jobs small description which will appear when listing all of the news
- In the `<big_description>` node you will be able to input the jobs big description which will appear in popup mode. The best way to use both of these is to have a small description in the listing mode and have the same description in popup mode + a little bit more text.
- You can have as many jobs as you want here, there's no limit.

News – news.xml

This module is similar with the jobs one except it's just a news display, clicking one button will launch a similar popup with the one on the jobs module. You can change a few settings like: the blur x and y amount, the animation time and type used for the popup. You can specify the title, data, urlTitle and the url which will appear in the browser and a html formatted description which will support most common html tags. The variables in this one are pretty close to the ones in the jobs module so there is no need for further instructions here. You will be able to input only one formatted html text field which will be displayed in popup mode.

Photo Gallery – gallery.xml

This module is a display of your photo / video gallery. You can have multiple sections with unlimited number of pictures or videos in each. The sections number is limited though by the module's total width.

In the .xml file you can change a few settings like the distance between buttons, the thumb width and height, the horizontal and vertical thumb space in pixels. You can specify the album's title, the urlTitle and the url which will appears inside the browser.

- distanceBetweenMenuButtons="14" This is the distance between the menu buttons
- thumbWidth="90" This is the thumbs width
- thumbHeight="68" This is the thumbs height
- horizontalThumbSpace="9" This is the horizontal thumb space
- verticalThumbSpace="9" This is the vertical thumb space
- urlTitle="Photo Gallery" –Title displayed in the browser
- url="/Gallery" url displayed in the browser's address
- <button title="Album 01" urlTitle="The first album" url="/Album01"> These are settings only for one album (title="some title" – the album's title / the button's title; urlTitle="some title" – displayed in the title; url="/Album1" – displayed in the browser's address.
- You will be able to add as many items as you want in the <item.....</item> node
- thumb="thumb.jpg" – the thumb address
- image="image.jpg" – the image address displayed in the popup launched when pressing the thumb
- title="some title" – title displayed at the top of the popup
- urlTitle="some url" – title displayer in the browser
- url="some url"
- you also have a html formatted description shown at the bottom of the image in the popup
- if you have a video, you will be able to write another optional field ex(image="some_video.flv", videoTitle="my video title goes here")

Portfolio – portfolio.xml

This module is the most complex one from the template and it can be very confusing and difficult to edit the .xml file without the help of the admin. I will briefly explain it here.

Settings:

<portfolioIndex> - these are settings for the first screen of the module

- <thumbWidth>271</thumbWidth>, <thumbHeight>236</thumbHeight> The thumb's width and height for the thumbs
- <distanceBetweenThumbs>18</distanceBetweenThumbs> The distance between the thumbs
- <thumbsOnSlider>3</thumbsOnSlider> The number of thumbnails on the slider

- `<scrollingBlurX>60</scrollingBlurX>` This is the blur amount applied when tweening this screen (pressing one thumb)
- `<fadeInAnimationTime>0.5</fadeInAnimationTime>` This is the fade in animation time in seconds for the thumb to be shown
- `<maxTextWidth>800</maxTextWidth>` This is the text's width. The text will stretch to this width and if it's bigger it will go to the next line by default

<projectsListing> This is the second screen shown where you have all of your projects from a category

- `<thumbWidthProjectTypeListing>199</thumbWidthProjectTypeListing>`,
`<thumbHeightProjectTypeListing>111</thumbHeightProjectTypeListing>` The thumb's width and height
- `<horizontalSpace>13</horizontalSpace>`, `<verticalSpace>13</verticalSpace>` This is the horizontal and vertical space between the thumbs
- `<projectsListingMaskHeight>312</projectsListingMaskHeight>` This is the mask's height for the thumbnail's viewing area
- `<projectsListingMaskWidth>900</projectsListingMaskWidth>` This is the mask's width for the thumbnail's viewing area
- `<projectsListingTextWidth>900</projectsListingTextWidth>` This is the description's text width
- `<backXPos>770</backXPos>` This is the back button's x position

<projectDetails> This is the third screen shown launched by pressing one thumb from the second screen

- `<thumbWidthProjectDetails>409</thumbWidthProjectDetails>`,
`<thumbHeightProjectDetails>365</thumbHeightProjectDetails>` This is the thumb's width and height shown at the right of the html formatted description

<popup> These are settings for the popup launched when pressing one thumb from the third screen

- `<popupBlurXAmount>40</popupBlurXAmount>`, `<popupBlurYAmount>0</popupBlurYAmount>` The blur x and y amount applied when the popup moves
- `<popupAnimationTime>.5</popupAnimationTime>` This is the popup animation time in seconds
- `<popupAnimationType>easeOutQuart</popupAnimationType>` This is the popup animation type in seconds

<general> These are some general settings applied to the whole module

- `<blurXAmount>20</blurXAmount>`
- `<blurYAmount>20</blurYAmount>`
- `<animationType>easeOutQuint</animationType>`
- `<animationTime>0.3</animationTime>`
- All the above will be applied for the existing transition from one screen to another.

The following variables and html description will be available for each section / screens. Please use a proper xml editing program so you can easily find your way in this .xml file. Please be careful to edit this without any error.

Services – services.xml

This module it's similar with the photo gallery one in menu functionality

- `<imageWidth>411</imageWidth>`, `<imageHeight>347</imageHeight>` The image width and height
- `<textHeight>356</textHeight>` This is the text's height
- `<slideshowInterval>5</slideshowInterval>` This is the slideshow interval in seconds
- `<fadeInAnimationTime>0.5</fadeInAnimationTime>` This is the fade in animation time
- `<fadeInAnimationType>linear</fadeInAnimationType>` This is the fade in animation type
- `<content urlTitle="Services" url="/Services">` This is the browser title and url title for the whole services module
- `<button title="Services Overview" urlTitle="Overview" url="/Overview">` This is the title, url title and url for one button
- You will be able to input a html formatted description in the description field
- You will be able to input as many pictures as you want for the slideshow

Homepage – homepage.xml

- `<thumbWidth>199</thumbWidth>`, `<thumbHeight>111</thumbHeight>` This is the thumb's width and height
- `<distanceBetweenThumbs>13</distanceBetweenThumbs>` This is the distance between thumbs
- `<thumbsOnSlider>4</thumbsOnSlider>` This is the number of thumbs viewable one the slider
- `<scrollingBlurX>60</scrollingBlurX>` This is the amount of blur applied on the slider when pressing next/ prev
- `<content title="Welcome dear visitors" url="/Homepage/">` This is the title which will appear at the top of the module and the url displayed in the browser
- You will also be able to add an html formatted description which will be places just under the main title
- `<slider title="My Latest Projects">` This is the title displayed just above the slider component
- `<item src="thumbnails/1.jpg" title="11SealCrazy Website Design" url="http://www.google.com/" target="_blank"></item>` This is the format of one item for the slider, the variables are self-explainable. You will be able to add as many thumbs as you want.

Enjoy this brand new release from Oxylus Flash.
